## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see page 12-13 of Remarks, filed May 1, 2008, with respect to claims 1, 9, 17, and 23 have been fully considered and are persuasive. The 35 U.S.C. 112 rejection of claims 1,3-9, 12, and 13 has been withdrawn.

### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: Independent claims 1 and 12 identify the unique distinct features of:

"special color point setting means for setting a point of the special color on a side connecting two vertices of the solid; table data generating means for, for the grid points on each of a line connecting two vertices of black and white on the solid, a line running on the surface of the solid and connecting a plurality of vertices of the solid and a line running on the surface of the solid and connecting a plurality of the vertices of the solid as well as the point of the special color, obtaining the grid point data based on the color measurement of predetermined patches; and interpolation means for dividing the solid by the lines into a plurality of solids which include said line as a side and executing an interpolation process on the plurality of divided solids based on the grid point data of the grid points on the lines to obtain grid point data for the grid points located on other than the lines in each of the divided solids, wherein said interpolation means, when executing the interpolation on the plurality of divided solids to obtain the grid point data of the divided solids, for the divided solid including the line containing the point of the special color or the divided solid including the line containing the point of a secondary color of

the special color and a color of the vertex, executes an enlargement process in which a coordinate of the point of the special color or the point of the secondary color is moved to one of two vertices of the side on which the points of the special color or the secondary color are set, executes the interpolation process on the enlarged solid, executes a reduction process in which the coordinate of the point of the special color or the point of the secondary color is moved to the original coordinate, and obtains the grid point data of the grid points on the original divided solid based on the grid points and grid point data obtained by the interpolation on the enlarged solid."

The closest prior art Hains'500 (US Patent 6,724,500) teaches a method for selecting CMY coordinates for printing a desired source color represented in an source color-space includes the step of obtaining coordinates for the printer gamut in the source color-space and then dividing the printer gamut into a plurality of tetrahedra, one of which contains the desired source color.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
